

Product and Sales Announcement

March 3rd, 2021

Subject: DLT Radial-Swage Tooling

Previously, you may have received correspondence from PCC Fluid Fittings regarding the discontinuation of our Generation 1 DLT radial-swage tooling line and its subsequent replacement, the Generation 2 tooling line. This distribution was also posted to our website, www.pccfluidfittings.com.

This announcement is to inform our customers that we are reversing this decision. We will continue to sell both complete kits and replacement parts for our Generation 1 DLT radial-swage tooling line. Additionally, we will continue to support our distribution partners in sales, maintenance, and repair of DLT Generation 1 tooling.

PCC Fluid Fittings will continue to develop, market, and expand the usage of DLT Generation 2 tooling, and looks forward to its widespread implementation across the industry in the near future. Generation 2 offers significant safety, performance, and lifespan improvements over Generation 1. PCC Fluid Fittings plans to gradually replace Generation 1 DLT tooling in a phased approach. Please continue to check our company website, www.pccfluidfittings.com, for further developments in this matter.

Generation 1 DLT Radial Swage Tooling	
Power Unit	Head Assembly
DLT05MAPW0000	DLT05PSHA3003
	DLT05PSHA3004
DLT10MAPW0000	DLT10PSHA3005
	DLT10PSHA3006
